

# Congratulations

to the DCD/TOCDF work force!

The workers at Deseret Chemical Depot and the Tooele Chemical Agent Disposal Facility have safely destroyed the last of the VX nerve agent-filled munitions that were stored at the depot.

The TOCDF, which began operations in August 1996, has destroyed more than one million munitions containing more than 7,400 tons of chemical nerve agents GB (sarin) and VX. This represents more than half of the depot's original chemical agent stockpile.

By destroying the entire stockpile of nerve agents GB and VX, our workers have tremendously reduced the risk to the surrounding community associated with continued storage of the aging chemical weapons.

Safety to our workers and the public and protection of the environment are our highest priorities. Each and every worker had a part in reaching this great achievement . . . **Congratulations!**
